

## COVID-19 Camp Information

Camps should implement several strategies to maintain healthy operations that include but are not limited to the following: masks, physical distancing and cohorting to the greatest extent possible, handwashing and respiratory etiquette, cleaning, contact tracing in combination with isolation and quarantine.

### Testing

**WOPHD recommends that anyone with any signs or symptoms of COVID-19 be tested.** Washington and Ozaukee Counties have partnered with Curative, Inc. to provide free oral COVID-19 testing at Washington County Fair Park and Ozaukee County Fairgrounds. Appointments can be scheduled online through Curative's website: [www.curative.com](http://www.curative.com). Individuals with positive results must isolate.

### Positive COVID-19 case

If an individual tests positive for COVID-19, they should isolate for a minimum of 10 days after a positive test or symptom onset. Isolation can end once 10 days have passed and an individual is symptom free for 24 hours.

### Household Close Contact

If an individual in a household tests positive for COVID-19 the individual should isolate for a minimum of 10 days. If the positive in the household is able to isolate completely away from others (separate living space and bathroom), the household close contacts are advised to quarantine for a minimum of 10 days from the date of the last contact with the positive.

If the positive in the household is not able to completely isolate away from others, the household close contacts are advised to quarantine for 10 days from the positive case's last day of isolation/well date. This could result in close contacts remaining quarantined for up to 20 days.

Regardless of the quarantine period, all household close contacts should monitor their symptoms and get tested if any symptoms arise. Household close contacts also have the option to end quarantine early. See image 1 regarding early testing for household contacts that are able to completely isolate away from the positive. See image 2 regarding early testing for household contacts that are not able to completely isolate away from the positive.

### Close Contact

A close contact is defined by anyone who has been within 6 feet of an infected person with COVID-19 for a cumulative period of 15 minutes or more over a 24-hour period.

**WOPHD recommends quarantining close contacts. Close contacts must quarantine for at least 10 days from the date of last exposure and to monitor their symptoms.**

For a shortened quarantine, individuals can be tested on day 6 and return as early as day 8 as long as they receive a negative test and remain symptom free.

Individuals who are fully vaccinated or previously diagnosed with COVID-19, within the last 3 months, do not need to quarantine unless they develop symptoms.

Washington County Office • 333 E. Washington St. Ste 1100 • West Bend, WI 53095 • 262-335-4462  
Ozaukee County Office • 121 W. Main St. Room #246 • Port Washington, WI 53074 • 262-284-8170

## Vaccination

As of May 12<sup>th</sup> 2021, individuals age 12 and older are eligible to receive a COVID-19 vaccine. If you are looking for a location to receive a vaccine, please visit: [www.vaccines.gov](http://www.vaccines.gov). The WOPHD is encouraging everyone to get the vaccine if eligible.

Per the [CDC](https://www.cdc.gov), an individual is not considered fully vaccinated until two weeks after the 2<sup>nd</sup> dose of a 2-dose series vaccine or two weeks after a 1 dose shot.

Fully vaccinated individuals can resume activities without wearing a mask or physically distancing, except where required by federal, state, local, tribal or territorial laws, rules and regulations, including local business and workplace guidance.
